

Python Production Deployment

Technologies Used

- NGINX
- Gunicorn
- Flask

How it is implemented?

- Usually if you have a Flask app you run it with a command ***python myapp.py***
- if you are using gunicorn then you should run it with a command ***gunicorn myapp:app***
- *above execution are synchronous*

Create Asynchronous Flask App Using Gunicorn - Gevent

- Using Gunicorn and gevent, you can run it asynchronously without changing any line of your code! just run it with the below command
- `gunicorn -k gevent myapp:app -workers 5`
